

Are You Tired Of Seeing Your Energy Dollars Go Through The Roof?

Start Saving Today!

Contact Your Local Green Energy
Barrier Dealer
TODAY For A
COMPLIMENTARY
No-Obligation
Energy Audit.

www.GreenEnergyBarrier.com

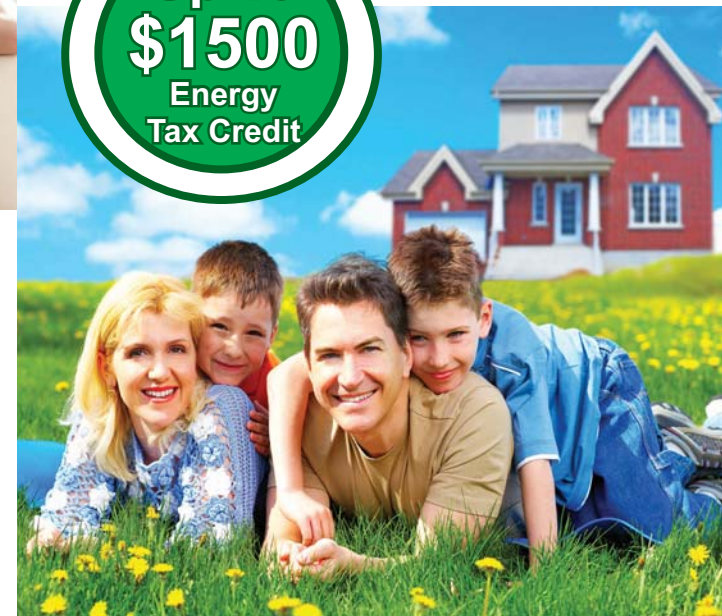

- Lowers your heating and cooling bills.
- Stops over 97% of radiant heat transfer.
- Advanced reflective foil technology.
- Maintenance free.
- Eligible for Energy Tax Credit.
- Extensive Warranty.
- Pays For Itself.

For A Complimentary Home Energy
Audit, Contact Your Local
Green Energy Barrier Dealer Today!

Save Money. Save Energy.
Protect The Environment.

Up To
\$1500

More than 45 Million homes in the US lack proper insulation.

The importance of effective attic insulation cannot be understated. Your attic is the number one area responsible for heat loss/gain in your home. Therefore, attic insulation is a major player in your home's heating and cooling; which directly translates into your energy bill.

Green Energy Barrier offers a cost effective solution to homeowners looking for ways to start conserving energy and saving money. Unlike typical insulation that merely resists heat, our reflective attic insulation product reflects heat by acting as a radiant heat barrier. Thus keeping your home at a comfortable temperature throughout the year.

Green Energy Barrier may be installed on top of your present insulation as an enhancement, stapled under your rafters, or installed inside of your crawl space.

Is there enough insulation in your attic?

The technology behind Green Energy Barrier was actually developed years ago by NASA.

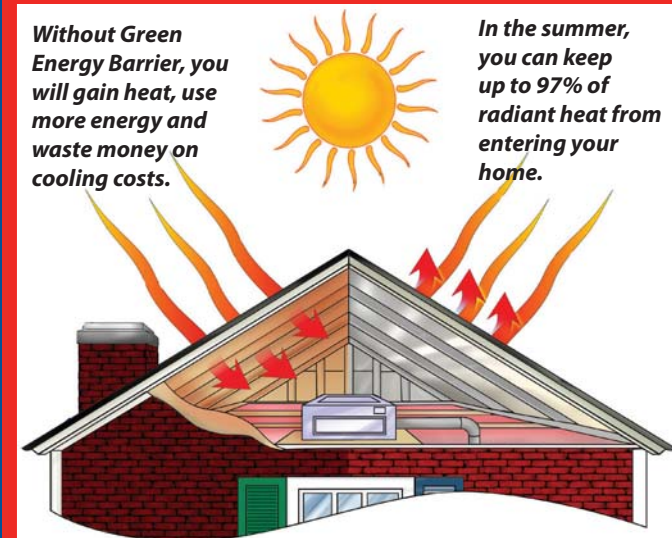

In a quest to discover a way to protect the astronauts from temperatures ranging from -273 degrees to +238 degrees Celsius, NASA found that a thin sheet of aluminum foil radiant barrier would do the same job as a seven-foot thick piece of conventional insulation. Needless to say the astronaut's space suits could not be seven-feet thick; therefore radiant barrier was implemented into the space suits. By placing the reflective barrier in the space suits it reflected the astronaut's body temperature back at them, keeping them warm. It also reflected the deadly radiation from the sun helping to keep them cool.

Stay Warmer In The Winter And Cooler In The Summer

Throughout the winter, heat will typically rise and escape a home through the attic. By having Green Energy Barrier professionally installed in the attic, that heat will be reflected back into the home, keeping it from escaping, and thereby reducing energy loss and costs wasted on heating.

When the sun beats down on a roof in the summer, the roof shingles heat up. The heat that gets stored in the shingles then radiates into the attic; making it hot and causing air conditioners to work harder to keep your home cooler. Green Energy Barrier reflects back up to 97% of that heat; blocking it from entering an attic.

Save Money, Save Energy... All Year Long.
